

IMPROVE YOUR OVERALL NETWORK SECURITY WITH BLAIR MICROSOFT CLOUD ASSESSMENT

Gain Critical Visibility and Control Over Your Microsoft Cloud Environments

The Blair Microsoft Cloud Assessment automatically gathers the data you need to get more visibility, control, and insight into both Azure AD and the core Microsoft 365 cloud services. It not only includes your own Microsoft Control Score and Secure Score from Microsoft but also shows your trending score against the average score of your peers. The benefits include:

- Taps into Microsoft's security scoring system to expose areas of highest risks and vulnerability
- Helps improve overall network security
- Includes comparative security benchmarks (measured against similar sized organizations) to help evaluate security posture
- Saves your IT team countless hours by automatically gathering all information about the Azure AD and Microsoft 365 environment compared to manually drilling up and down to gather information
- Goes beyond Microsoft Control and Secure Score to identify risks based on IT best practices
- Includes a detailed Change Report:
 - o Change Management
 - o Capture and document unwanted changes in the event you need to roll back those changes

Secure your data and cloud environments and identify strategies to optimize your cloud experience.
